## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-isolated LED Drivers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A non-isolated LED driver is a power conversion device that does not require transformer electrical isolation. It directly provides a constant current or voltage to the LED load through a buck, boost or buck-boost topology. Its core features are high efficiency (>90%), compact design (saving PCB space) and low cost. It is suitable for scenarios with low safety isolation requirements, such as LED lighting (bulbs, downlights), backlight modules and decorative lamps. Typical solutions include linear drivers (such as AMC7135) and switch drivers (such as PT4115), supporting PWM/analog dimming functions.

The global Non-isolated LED Drivers market size was estimated at USD 1580.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Non-isolated LED Drivers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
