Abstracts

Non-isolated low-side gate drivers are integrated circuits (ICs) designed to control the switching of MOSFETs or IGBTs in the low-side position in power circuits, such as motor drives, power supplies, and inverters. These drivers are called "non-isolated" because they directly interface with the low-side power switch, without requiring electrical isolation between the control logic and the power device. They are essential in ensuring efficient switching of power devices in the low-side part of the circuit.

The global Non-isolated Low-side Gate Drivers market size was estimated at USD 78.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
