## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-lethal Grenades competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-lethal grenades are individual, throwable, and non-lethal weapons designed for law enforcement and military personnel. They are intended to temporarily disrupt, deter, or disperse a target group by producing intense sound, light, pressure, or irritant gas effects without causing fatal injuries. Common types include flash grenades, tear gas grenades (CS/OC gas-release), and rubber ball grenades. They are widely used in scenarios such as counterterrorism raids, hostage rescue, crowd control, and building clearance. They effectively reduce the intensity of confrontation and ensure operational safety without resorting to lethal force. In 2024, the global production of non-lethal grenades reached 12.02 million pieces, with an average selling price of US\$74 per piece.

The global Non-lethal Grenades market size was estimated at USD 889.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
