Abstracts

Non-locking carabiners are lightweight, spring-loaded metal loops with a self-closing gate mechanism designed for quick attachment and detachment without manual locking, primarily used in climbing, rescue operations, industrial safety, and outdoor recreational activities where rapid connection is prioritized over absolute security. These carabiners, typically made from aluminum alloy or steel, feature a sprung gate that automatically closes but lacks a secondary locking mechanism, making them unsuitable for critical load-bearing scenarios where accidental opening could occur; they are instead valued for their efficiency in organizing gear, creating temporary anchor points, and facilitating smooth rope management in non-life-threatening applications.

The global Non Locking Carabiners market size was estimated at USD 210.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
