## Abstracts

Elastomeric couplings require no lubrication and are generally less expensive than metallic couplings. Elastomeric couplings include all designs that use a non-metallic element (usually rubber or plastic) within the coupling, through which the power is transmitted. Elastomeric couplings can be further classified as compression or shear depending on which is the principle load on the elastomer. Compression types include jaw, donut, and pin and bushing, while shear types include tire, sleeve, and molded elements. Focus on Industrial Automation and Machinery: The automation trend in industries necessitates flexible and reliable coupling solutions. Non-lubricated elastomeric couplings meet this need, aligning with the trend of industrial automation. Growth in Manufacturing and Industrial Sectors: The growth of the manufacturing and industrial sectors worldwide drives the demand for efficient coupling solutions to enhance machinery performance and productivity, boosting the market for these couplings.

The global Non-Lubricated Elastomeric Couplings market size was estimated at USD 1822.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
