Abstracts

Solar panels are one of the important auxiliary materials for modules. They are mainly used to protect the edge of photovoltaic glass, strengthen the sealing performance of modules, and improve the mechanical strength of modules, which has an important impact on the life of modules. As an important auxiliary material for photovoltaic modules, the photovoltaic frame has been developing along with the photovoltaic industry for many years. Aluminum alloy materials have dominated the gold frame market with many advantages, and the current penetration rate is over 95%. Offshore photovoltaic power stations require photovoltaic module materials to have strong resistance to salt spray corrosion. Aluminum is an active metal and has poor resistance to salt spray corrosion. Composite materials have no galvanic corrosion and are a better technical solution in offshore photovoltaic power stations.

The global Non Metallic Frame For Solar Modules market size was estimated at USD 967.87 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
