Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-metallic Mineral Processing Collector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-metallic Mineral Processing Collectors are a type of agent that can selectively adsorb on the surface of minerals during the flotation process of non-metallic minerals, making the mineral surface hydrophobic and thus improving the floatability of the minerals. Collector molecules are generally composed of polar groups and non-polar groups. Polar groups can selectively adsorb on the surface of minerals, while non-polar groups face outward, making the surface of minerals change from hydrophilic to hydrophobic, so that mineral particles can attach to bubbles and achieve separation from gangue minerals. In the actual non-metallic mineral beneficiation process, it is necessary to comprehensively consider and select appropriate collectors based on factors such as the nature of the ore, the beneficiation process and product requirements, and optimize the agent system through experiments to achieve the best beneficiation effect.

The global Non-metallic Mineral Processing Collector market size was estimated at USD 689.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
