Report Overview

Non-Native Database Management Systems are systems that provide database tools for external users to access data with a different query language. Non-Native Database Management Systems can integrate data in different query languages, which makes them compatible with SQL and NoSQL databases. Non-Native Database Management Systems are also known as NoSQL databases, which are databases that use a non-relational data model to store and retrieve data. NoSQL databases are designed for different use cases or data types, such as key-value pairs, documents, graphs, or columns. NoSQL databases offer advantages such as flexibility, scalability, performance, and availability over traditional relational databases.
