Report Overview

Non-perfluorinated proton exchange membrane is a proton exchange membrane that does not contain fluorine atoms. It is an ion-selective permeable membrane that provides channels for proton migration and transmission, separates gas reactants, and blocks the role of electrolyte. Compared with perfluorinated proton exchange membranes, non-perfluorinated proton exchange membranes have the advantages of low cost, environmental friendliness, and high temperature resistance, but they also have disadvantages such as low mechanical strength, low water molecule absorption rate, and low conductivity. The main materials of non-perfluorinated proton exchange membranes are sulfonated polyaryl ether ketone, sulfonated polythioether sulfone, sulfonated polyether ether ketone, sulfonated naphthalene polyether sulfone ketone, sulfonated polyimide, Sulfonated polybenzimidazole, etc.

The global Non Perfluorinated Proton Exchange Membrane market size was estimated at USD 285.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.15% during the forecast period.
