Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-permeable Cryoprotectant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-permeable cryoprotectants are a class of macromolecules that cannot penetrate the cell membrane. They work in the extracellular environment to reduce damage to cells during freezing. Unlike permeable cryoprotectants, non-permeable cryoprotectants cannot enter the interior of cells, but protect cells from freezing damage by regulating extracellular osmotic pressure, reducing intracellular ice crystal formation, and maintaining cell membrane integrity.

The global Non-permeable Cryoprotectant market size was estimated at USD 64.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
