Report Overview:

Plasticizers are the chemicals added to polymers to soften the hard and brittle plastic to flexible and soft material thereby improving the toughness of the material. PVC accounts for more than 80% of the overall plasticizers consumption. Traditionally, the phthalate plasticizers were the most commonly used plasticizers across a number of applications but owing to the human health risks and environmental concerns regarding the toxic substances present in such plasticizers, the use of non-phthalate plasticizers is projected to grow significantly. The non-phthalate plasticizers are mainly used for sensitive applications such as food contact, medical and toys primarily and things that involve close human contact majorly toys and childcare applications. Non-phthalate plasticizers are effective alternative to the traditional/conventional plasticizers which are toxic in nature and are harmful for direct human contact.

The Global Non-Phthalate Plasticizers Market Size was estimated at USD 2658.02 million in 2023 and is projected to reach USD 3441.61 million by 2029, exhibiting a CAGR of 4.40% during the forecast period.
