Abstracts

The market for non-PVC multilayer films refers to the production, distribution, and consumption of flexible packaging materials composed of multiple polymer layers that exclude polyvinyl chloride (PVC), utilizing alternatives such as polyolefins (e.g., polyethylene and polypropylene), polyesters (e.g., PET), polyamides (nylon), ethylene vinyl alcohol (EVOH), and metallized or transparent barrier films. These films are engineered to provide specific functional properties?including enhanced barrier protection against moisture, oxygen, and light; improved mechanical strength; heat sealability; and puncture resistance?while addressing environmental and health concerns associated with PVC, such as chlorine content, potential dioxin release during incineration, and recycling complications. Applications span industries like pharmaceuticals (blister packaging), food and beverages (flexible pouches, lidding films), medical device packaging, and personal care products, driven by regulatory pressures, sustainability initiatives, and consumer demand for safer, recyclable, or compostable materials.

The global Non Pvc Multilayer Films market size was estimated at USD 1185.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
