Abstracts

Non-resilient flooring refers to hard surface flooring materials that do not compress under pressure, including ceramic and porcelain tile, natural stone (such as marble, granite, and slate), concrete, brick, and terrazzo, which are known for their durability, resistance to moisture and wear, and minimal maintenance requirements compared to softer or more flexible options like vinyl, laminate, or carpet. These materials are commonly used in high-traffic commercial, industrial, and residential settings?particularly in kitchens, bathrooms, and entryways?where long-term performance and aesthetic appeal are prioritized, though they often come with higher installation costs and less underfoot comfort due to their rigid, unyielding nature.

The global Non Resilient Flooring market size was estimated at USD 38450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
