Abstracts

Non-Return Valves, also known as check valves, normally allow liquids (and gasses) to flow through them in only one direction. The valves have two openings in the body, one for fluid to enter and the other for fluid to leave. Non-Return Valves work automatically, which means that most do not have a handle or stem. Increasing demand from end-use sectors such as water & wastewater treatment, oil & gas, energy & power is driving the check valve market. Furthermore, the increasing adoption of industrial automation is encouraging smart check valves, which is likely to drive market expansion throughout the forecast period.

The global Non-return Valve market size was estimated at USD 6051.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
