## Abstracts

Non-rising stem gate valves are a type of industrial valve where the stem does not move upward during operation but instead rotates in place to raise or lower the gate, making them particularly suitable for applications with limited vertical space or where stem exposure is undesirable, such as in underground installations, ships, or tightly packed piping systems; they are commonly used in water supply, oil and gas, chemical processing, and wastewater management industries due to their compact design, durability, and ability to maintain a seal under high-pressure conditions.

The global Non Rising Stem Gate Valves market size was estimated at USD 1020.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
