## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Non-Selective Broadleaf Herbicides competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Non-selective broadleaf herbicides are a type of chemical herbicide that can kill a wide range of broadleaf plants (including crops and weeds). They are not selective, that is, they will kill both target weeds and non-target plants after contact. They usually cause plants to wilt or die quickly by destroying photosynthesis, protein synthesis or cell membrane structure. Representative ingredients include glyphosate, glufosinate and saflufenacil. Due to their broad spectrum and high efficiency, non-selective broadleaf herbicides are mainly used to remove weeds before tilling of cultivated land, clean up non-cultivated land (such as railways, highways, gardens, and orchards), and control weeds in industrial land. They are an indispensable basic weed control tool in modern agriculture and environmental management.

The global Non-Selective Broadleaf Herbicides market size was estimated at USD 4689.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
