Abstracts

Non-spherical optical lenses are precision-engineered optical components designed to correct spherical aberration and other distortions by deviating from the traditional spherical curvature of conventional lenses, featuring complex aspheric surfaces that are rotationally symmetric but not spherical, which allows for improved optical performance, reduced size and weight of optical systems, and the elimination of multiple lens elements in assemblies. These lenses are manufactured using advanced techniques such as precision molding, diamond turning, or grinding and polishing, and are critical in applications requiring high image quality, minimal distortion, and compact design, including smartphone cameras, medical imaging devices, automotive sensors, augmented/virtual reality systems, and high-end photographic and scientific instruments.

The global Non Spherical Optical Lens market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
