Abstracts

Non-sterile cervical brushes are single-use medical devices designed for the collection of cervical cell samples in routine gynecological examinations and screening procedures, primarily for Pap tests (Pap smears) and HPV testing; they consist of a plastic handle with bristles or fibers at the tip, which gently abrade the cervical surface to gather exfoliated cells, and unlike their sterile counterparts, these brushes are intended for non-surgical, outpatient settings where aseptic conditions are not strictly required, prioritizing cost-effectiveness and ease of use in high-volume screening environments such as clinics, laboratories, and primary care facilities.
