Abstracts

Non-stick bipolar forceps are specialized surgical instruments used in electrosurgery to grasp and coagulate tissue while minimizing adherence of charred tissue to the tips, achieved through advanced surface coatings such as titanium nitride, zirconium nitride, or proprietary non-stick materials that reduce thermal buildup and improve procedural efficiency by allowing smoother tissue release and reduced cleaning interruptions during operations. These instruments function by delivering controlled high-frequency electrical current between the two tips to seal blood vessels and tissues with precision, commonly utilized in neurosurgery, plastic surgery, gynecology, and other delicate procedures where precision, minimal collateral damage, and efficient hemostasis are critical.
