Report Overview:

A non-stick surface is a surface engineered to reduce the ability of other materials to stick to it. Non-stick cookware is a common application, where the non-stick coating allows food to brown without sticking to the cookware. For non-stick cookware, the non-stick coating allows food to brown without sticking to the pan. Non-stick is often used to refer to surfaces coated with polytetrafluoroethylene (PTFE), a well-known brand of which is "Teflon." With the health concerns centered on PTFE in recent years, Ceramic coatings are developed as a newer material in the world of nonstick cookware. It's widely considered to be the safest and most environmentally friendly option. Ceramic is free of PTFE and PFOA (more on PTFE and PFOA below). In the twenty-first century other coatings have been marketed as non-stick, such as anodized aluminium, ceramics, silicone, enameled cast iron, and seasoned cookware.
