Abstracts

Non-stick cookware coatings refer to specialized surface treatments applied to cookware to prevent food adhesion, with the most common types being polytetrafluoroethylene (PTFE)-based coatings (often marketed under brand names like Teflon) and ceramic-based coatings, which utilize silica (sand-derived) layers reinforced with sol-gel technology for heat resistance and release properties; these coatings function by creating an ultra-smooth, low-friction surface that reduces the need for cooking oils and simplifies cleaning, and they are typically applied through industrial processes such as spraying or rolling followed by high-temperature sintering to ensure durability and performance across various cooking applications.
