Report Overview:

Non-studded tires, also known as studless tires or winter tires, are a type of tire designed specifically for driving in winter conditions, including snow and icy surfaces. Unlike studded tires, which have metal studs embedded in the tread for added traction on ice, non-studded tires achieve winter performance through advanced tread designs, rubber compounds, and other technologies. These tires are optimized for cold weather and low-traction environments, providing improved grip, handling, and safety during winter driving.
