Abstracts

Non-surgical rejuvenation refers to a broad category of aesthetic treatments designed to improve the appearance of skin, reduce signs of aging, and enhance facial or body contours without the need for invasive surgery, extended downtime, or general anesthesia. These procedures typically include injectables such as neuromodulators (e.g., Botox) and dermal fillers (e.g., hyaluronic acid-based products), energy-based devices like lasers for skin resurfacing, intense pulsed light (IPL) for pigmentation, radiofrequency for skin tightening, and ultrasound for lifting, as well as non-invasive body contouring technologies such as cryolipolysis (fat freezing) and radiofrequency-assisted lipolysis. The core appeal lies in their ability to deliver noticeable yet natural-looking results with minimal risk, rapid treatment times, and gradual, customizable outcomes that align with modern preferences for preventative and maintenance-oriented aesthetic care.

The global Non Surgical Rejuvenation market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
