Abstracts

Non-Woven Quick-Change Discs are abrasive discs designed for surface finishing, cleaning, and polishing tasks, commonly used in industrial applications. These discs are made from non-woven fibers, which are bonded together with a resin, creating a flexible, durable material that effectively scours surfaces without damaging them. The "quick-change" feature refers to a convenient attachment system, typically involving a hook-and-loop or twist-lock mechanism, allowing users to swiftly replace or swap out the discs during operations without the need for tools. This makes them ideal for high-efficiency, repetitive tasks, as they can be easily changed to match different materials or abrasive needs, improving productivity and reducing downtime. Non-woven quick-change discs are often used on metal, wood, plastic, and other surfaces for tasks such as deburring, blending, finishing, and cleaning.

The global Non Woven Quick-Change Discs market size was estimated at USD 927.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
