## Abstracts

Non-woven unidirectional carbon fiber is a kind of non-woven carbon fiber reinforced material. Consists of unidirectional layers stitched together. Because each layer can be placed in different directions or axes, it provides strength and stiffness in multiple directions. This allows for a fiber concentration density that provides maximum longitudinal tensile potential and is greater than any other fabric. It is three times the longitudinal tensile strength of structural steel and one fifth the weight density.

The global Non Woven Unidirectional Carbon Fiber Cloth market size was estimated at USD 480.94 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
