Report Overview

Pelargonic acid is a clear, light colored, monobasic acid which is liquid at room temperature. Pelargonic acid derives unique performance characteristics from its oddcarbon chain length, providing definite advantages in many quality and performancesensitive applications over short-chain fatty acids obtained from imported coconut oil. The nine-carbon structure difers from the even-carbon chains of coconut fatty acids, imparting pelargonic acid and its derivatives with significantly diferent solubility characteristics, lower-temperature fluidity, and low melting points.
