Abstracts

Noninvasive diagnostics refer to medical testing methods that do not require instruments to break the skin or physically enter the body, relying instead on external imaging, sensor-based monitoring, or biological sample analysis (such as breath, saliva, or urine) to detect, monitor, or diagnose diseases, thereby minimizing patient risk, discomfort, and recovery time. This category includes technologies like medical imaging (MRI, CT scans, ultrasound), wearable health monitors (e.g., ECG patches, continuous glucose monitors), molecular diagnostics from non-invasively collected samples, and optical techniques such as retinal scanning or spectroscopy, all aimed at providing accurate diagnostic information without surgical intervention or invasive procedures.
