Abstracts

Nonionic emulsifying wax is a key cosmetic and pharmaceutical ingredient composed of cetearyl alcohol and polyoxyethylene derivatives, primarily functioning as a nonionic surfactant that stabilizes oil-in-water emulsions by reducing surface tension between immiscible phases. Its nonionic nature ensures compatibility with a wide pH range and various ionic ingredients, making it particularly valuable for formulating creams, lotions, and ointments where mildness, stability, and low skin irritation are prioritized. The wax acts as both an emulsifier and a consistency agent, providing structure to emulsions while enabling the incorporation of oils, actives, and other components without requiring neutralization, which simplifies manufacturing processes and enhances formulation flexibility.

The global Nonionic Emulsifying Wax market size was estimated at USD 105.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
