Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nonwoven Weed Control Fabric competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global nonwoven weed control fabric production reached approximately 861,815 tons, with an average global market price of around USD 2,000 per ton. A factory gross profit of USD 400 per ton with 20% gross margin. A single line full machine capacity production is around 4,000 tons per line per year. Downstream demand is concentrated in agriculture with landscaping, horticulture and roadside included. Nonwoven weed control fabric is a breathable, felt-like synthetic material, typically made from polypropylene or polyester, that blocks sunlight to suppress weed growth while allowing water, air, and nutrients to pass through to the soil and plants below. Unlike woven fabrics, its fibers are bonded together through heat, chemicals, or mechanical processes rather than being interlaced. This structure makes the fabric durable, easy to cut and install, and effective in preventing weeds in gardens, landscapes, and agricultural settings.

The global Nonwoven Weed Control Fabric market size was estimated at USD 1724.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
