Report Overview

Nootkatone (CAS 4674-50-4) is a naturally occurring sesquiterpene ketone primarily found in grapefruit peel oil, Alaska yellow cedar, and other citrus sources, known for its distinctive grapefruit-like aroma and flavor. It is widely used in the food and beverage industry as a flavoring agent, in cosmetics and personal care products for its fragrance properties, and increasingly in the insect repellent sector due to its efficacy against ticks, mosquitoes, and other pests. The compound's natural origin and bioactivity have also spurred interest in pharmaceuticals and agrochemicals, particularly as demand for eco-friendly and sustainable alternatives grows. Regulatory approvals, such as its classification by the U.S. EPA as a biopesticide, further enhance its market potential. However, challenges such as high production costs, limited natural extraction yields, and competition from synthetic counterparts influence supply dynamics and pricing. Market growth is driven by rising consumer preference for natural ingredients, expanding applications in pest control, and innovation in synthetic biology to improve production efficiency. Key regions include North America and Europe, where regulatory support and consumer awareness are strongest, though Asia-Pacific is emerging as a significant player due to increasing demand for natural flavors and fragrances.

The global Nootkatone (CAS 4674-50-4) market size was estimated at USD 14.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 20.09% during the forecast period.
