Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Normally Closed Magnetic Reed Relay competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The normally closed magnetic reed relay is an electromagnetic control device based on the reed switch technology. It consists of a pair of magnetic reeds sealed in a glass tube. When there is no external magnetic field, the reeds maintain contact (normally closed state) due to their own elasticity. When the external magnetic field is applied, the reeds are magnetized and attract each other, and the contacts are disconnected; after the magnetic field disappears, the reeds resume contact. It is suitable for circuits that require default access and automatic recovery after power failure (such as safety systems, fault detection, signal switching).

The global Normally Closed Magnetic Reed Relay market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Normally Closed Magnetic Reed Relay market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
