## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Normally Closed Reed Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The normally closed reed switch is a passive component based on magnetic control, consisting of a pair of ferromagnetic reeds sealed in a glass tube. When there is no external magnetic field, the reeds are in contact due to their own elasticity, forming a closed circuit (normally closed state); when an external magnetic field is applied, the reeds are magnetized and attract each other, the contacts are disconnected, and after the magnetic field disappears, the reeds resume contact, which is suitable for circuits that require a default path and automatic recovery after power failure (such as safety systems, fault detection, signal switching).

The global Normally Closed Reed Switch market size was estimated at USD 248.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Normally Closed Reed Switch market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
