Report Overview

Pentane is colourless with a very low odour and high volatility thanks to its low, narrow boiling range – it is among the lowest boiling hydrocarbon liquids and so evaporates at a very high rate. It is used principally as a blowing agent in foam production, as a propellant in aerosols and as reaction media for polymerisation processes. In actual production, pentane blend is the most common type. Isopentane and Normalpentane Blend contain Isopentane and Normalpentane as the main ingredients. The single principal content is not less than 10%, not more than 90%. Pentane blend is a very fast evaporating hydrocarbon solvent and low in impurities such as sulphur, olefins, benzene and total aromatics. Examples of end uses for this solvent are blowing agent, electronic cleaning and polymerisation. In the report, we main cover pentane blend.
