## Abstracts

The Neural Network Processor (NPU) IP is a licensable semiconductor intellectual property core that integrates the hardware architecture design of the neural network processor and can be embedded in SoC by chip design companies. NPU is a type of hardware accelerator specifically designed to accelerate artificial intelligence and machine learning tasks. By providing a high-parallelism matrix operation unit, it can efficiently perform deep neural network reasoning at low power consumption and low latency. By 2024, the neural network processor (NPU) IP market has shifted from a "single-core computing power competition" to differentiated competition in "multi-modal, multi-scenario, and closed-loop tool chains": Arm, Synopsys, and Cadence will continue to control the licensing entrance for high-end mobile phone APs and autonomous driving SoCs. However, domestic IP vendors, with their customizable data flow architecture and chiplet-level interconnection interfaces, have rapidly penetrated mid-range security SoCs, edge AI boxes, and automotive smart cockpit MCUs, with licensing prices dropping to US\$0.15-0.3/MAC, significantly lower than the US\$0.5-1 of international vendors. RISC-V + NPU hardware and software integrated solutions have become the preferred choice of white-label AIoT chip manufacturers. It is expected that in 2025, more automakers will directly adopt domestic NPU IP in cockpit domain control to avoid export control risks. At the same time, leading cloud vendors will reverse-license NPU IP from their self-developed AI accelerators to terminal partners, forming a vertical closed loop of "cloud training-end inference", which will further compress traditional independent NPUs. In terms of premium space for IP suppliers, IPs with scalable sparse computing, secure isolation and automotive ASIL-D certification will be the first to lock in orders in the next two years.

The global NPU IP market size was estimated at USD 153.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.30% during the

forecast period.
