Abstracts

Nuclear decommissioning refers to the administrative and technical process of retiring a nuclear facility?such as a power plant, research reactor, or fuel cycle facility?from service after its operational life has ended, with the aim of reducing residual radioactivity to a level that permits the release of the property and termination of the nuclear license, typically involving stages like decontamination, dismantling, waste management, and site restoration to ensure long-term safety and environmental protection. The market for nuclear decommissioning is expanding globally, driven by the aging nuclear fleet?with many reactors approaching or surpassing their designed lifetimes?coupled with policy shifts in several countries toward phasing out nuclear energy in favor of renewables or alternative sources. This sector is characterized by high regulatory scrutiny, significant capital investment, and specialized expertise in radiological safety, engineering, and waste handling, with demand concentrated in regions like Europe and North America where early-generation reactors are prevalent, though emerging markets in Asia are also gradually entering the decommissioning phase. Key players include specialized engineering firms, waste management companies, and government agencies, while innovation focuses on cost reduction through robotics, remote handling technologies, and more efficient decontamination methods, though challenges such as funding shortfalls, public opposition, and the logistical complexities of long-term radioactive waste disposal persist. Growth is further fueled by increased decommissioning activities in countries like Germany, Japan, and the UK, as well as supportive regulatory frameworks and international cooperation on safety standards, positioning nuclear decommissioning as a critical and enduring segment of the global energy and environmental services landscape.

The global Nuclear Decommissioning market size was estimated at USD 10854.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

6.80% during the forecast period.
