Abstracts

Nuclear grade boric acid is a highly pure boric acid widely used in the field of nuclear energy, especially in reactors of nuclear power plants. The purity requirements for nuclear grade boric acid are much higher than those for ordinary industrial boric acid, and it must comply with strict quality control standards to ensure that it does not interfere with the nuclear reaction process in any way. The boron element in boric acid has good neutron absorption properties, which enables nuclear grade boric acid to effectively regulate the reaction rate of nuclear reactors. It is used as an absorber to control neutrons in nuclear power plants, helping to regulate the power and stability of reactors.

The global Nuclear Grade Boric Acid market size was estimated at USD 48.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.60% during the forecast period.
