Abstracts

Nuclear grade mixture resins are specialized ion exchange resins engineered for use in the primary and secondary coolant circuits of nuclear power plants, where they serve critical functions such as purifying reactor coolant, controlling water chemistry, and removing radioactive contaminants like cesium, cobalt, and boron. These resins must meet exceptionally stringent standards for purity, thermal stability, radiation resistance, and chemical durability due to the extreme operating conditions and safety requirements of nuclear environments. They are typically composed of cross-linked polystyrene or acrylic matrices with functional groups tailored for selective ion exchange, and their performance is rigorously tested and certified to comply with nuclear regulatory standards, ensuring operational reliability and minimizing the risk of radiation release or system corrosion.

The global Nuclear Grade Mixture Resins market size was estimated at USD 380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
