The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Nuclear Island Pumps competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Nuclear Island Pumps production reached approximately 289 units, with an average global market price of around US\$ 8,028,000 per unit. In 2024, the global 's total production capacity of Nuclear Island Pumps reached 390 units. The industry average gross profit margin of this product reached 37%. Nuclear island pumps are a general term for all pumps in the "nuclear island" part of a nuclear power plant. They are the core equipment for fluid transportation within the nuclear island. Just like the heart supplies blood to the human body, they provide fundamental guarantees for the safe and stable operation of the nuclear island. Upstream raw materials include stainless steel, titanium alloys, and high-temperature alloys. Core components mainly include motors, seals, castings, and various forgings. Material quality directly determines the pump's lifespan and reliability. The core of the upstream industry lies in ensuring a reliable supply of cutting-edge materials and key components. Technologies for some top-performance special materials and high-end seals are still controlled by a few companies in developed countries. The midstream is the main battleground for technological competition, with the global market exhibiting a pattern of "international giants dominating, and leading companies from various countries vying for dominance." International manufacturers such as Flowserve (USA), KSB (Germany), Framatome (France), and Westinghouse (USA) hold important positions in the high-end market, especially in Europe and the US, thanks to their long-term technological accumulation and global layout. Chinese manufacturers, represented by state-owned enterprises such as Shenyang Blower Works Group, Harbin Electric Corporation, and Dongfang Electric Corporation, are making rapid progress. Downstream demand is directly driven

by the nuclear power policies of various countries. Active nuclear power construction in emerging markets such as China and India is the main driver of growth. Technological upgrades and equipment replacements of existing units in Europe and North America are also important markets.

The global Nuclear Island Pumps market size was estimated at USD 2320.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
