Abstracts

Nuclear waste management services refer to the comprehensive professional technical activities provided for radioactive waste generated in nuclear energy production, research, and industrial activities, encompassing sorting, pretreatment, processing, preparation, transportation, and final disposal. Its core lies in reducing waste volume and hazard through physical, chemical, and engineering techniques, and safely encapsulating the treated waste products in compliant containers, ultimately achieving long-term isolation and monitoring in specialized facilities such as deep geological repositories. This service strictly adheres to the nuclear safety regulations of the International Atomic Energy Agency and various countries, aiming to minimize the long-term risks of radioactive materials to the environment and public health. It is an indispensable and crucial link in the sustainable development of nuclear energy and the radiation protection system. The global nuclear waste treatment services market is projected to maintain steady growth in the future. This growth is primarily driven by the continued increase in global demand for clean energy, which in turn has fueled the development of the nuclear power industry and created a rigid demand for the safe treatment of nuclear waste. Simultaneously, major nuclear-powered countries are implementing increasingly stringent regulations on radioactive waste treatment and storage. Regionally, the Asia-Pacific region is expected to be the fastest-growing market during the forecast period due to the increasing number of nuclear power plants in developing economies. In conclusion, nuclear waste treatment services are a continuously developing field driven by policy, technology, and market demand, and will become increasingly important as the use of nuclear energy deepens.

The global Nuclear Waste Disposal Service market size was estimated at USD 3022.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
