## Abstracts

Nylon nucleating agent is an additive designed for polyamide materials. It can improve the performance and processing characteristics of nylon by regulating its crystallization behavior. Nylon is a semi-crystalline polymer. Its crystallization rate, crystallinity and crystal structure have an important influence on the mechanical properties, thermal stability and dimensional stability of the material. The main function of the nucleating agent is to provide additional crystallization nucleation points for the polymer melt, thereby accelerating the crystallization process, increasing the crystallinity and improving the performance of the material in use and processing.
