Abstracts

The O-arm 3D Imaging Navigator is an advanced medical imaging system used primarily in spinal and orthopedic surgeries to provide real-time, high-resolution, three-dimensional images of the patient's anatomy. This system uses a specialized mobile C-arm that can quickly capture detailed 3D images during surgical procedures, enabling surgeons to visualize the precise location of bones, soft tissues, and implants. The O-arm allows for intraoperative imaging, offering both fluoroscopic and 3D capabilities to guide complex procedures with enhanced accuracy. The system is designed to improve the precision of surgical navigation, reducing the risk of complications and improving patient outcomes. It is often used in conjunction with surgical navigation software, enabling surgeons to plan and execute operations with greater confidence and precision. Its ability to capture images quickly and provide immediate feedback is a key advantage in minimally invasive surgery and complex spinal operations.

The global O-arm 3D Imaging Navigator market size was estimated at USD 376.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
