Report Overview

O Nitroanisole (CAS 91-23-6) is an organic compound primarily used as an intermediate in the synthesis of dyes, pharmaceuticals, and agrochemicals. It is a pale yellow crystalline solid derived from the nitration of anisole, characterized by its nitro group (-NO₂) attached to the methoxy-substituted benzene ring. The compound's chemical properties, including its reactivity and solubility, make it valuable in producing azo dyes, pigments, and certain specialty chemicals. Its demand is closely tied to end-use industries such as textiles, where it contributes to vibrant dye formulations, and agriculture, where it serves as a precursor in pesticide manufacturing. Regulatory compliance regarding handling, storage, and environmental impact influences its production and supply chain dynamics. Market trends for O Nitroanisole are driven by regional industrial growth, particularly in Asia-Pacific, where chemical manufacturing is expanding, alongside evolving environmental regulations that may affect production methods or substitute materials. Pricing fluctuates with raw material costs (e.g., anisole, nitric acid) and shifts in downstream demand.
