Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on γ -Polylysine HCL competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. γ -Polylysine HCL is a food additive extracted from the amylase-producing *Streptomyces chromogenes*. It has the characteristics of broad spectrum, high efficiency, non-toxic, and little influence on pH value. It is composed of a linear polymer of lysine and is usually a light yellow powder with strong hygroscopicity and a slightly bitter taste. The raw materials for γ -polylysine hydrochloride primarily include a carbon source (such as glucose, starch sugar), a nitrogen source, inorganic salts, and hydrochloric acid. The key lies in producing lysine through microbial fermentation, followed by extraction and crystallization to produce the finished L-lysine hydrochloride. γ -polylysine hydrochloride is mainly used for food preservation and preservation, suitable for fruits, vegetables, meat and meat products, rice noodles and their products, beverages, etc. γ -polylysine is a natural preservative of microbial origin. It has advantages that are incomparable to synthetic preservatives and has broad application prospects. Global sales in 2024 are expected to be approximately 1,100 tons, with an average market price of approximately \$165 per kilogram. Major companies in the industry boast gross profit margins of approximately 15%~30%. Annual production capacity for a single production line is estimated at 20~100 tons. The competitive landscape in the γ -polylysine hydrochloride market is highly concentrated. Leading manufacturers possess core bacterial strains and high-purity refining technologies, while small and medium-sized enterprises primarily focus on food additives. Chinese companies, leveraging cost advantages and process improvements, have rapidly caught up in production capacity and have become a major global supplier. The γ -polylysine hydrochloride industry has broad development prospects. Under the "carbon neutrality" initiative, China

encourages the development of green and sustainable biomanufacturing industries. L-lysine, as a natural product produced through biofermentation, aligns with the country's green development strategy. From a market demand perspective, the continued development of the food industry and the trend of consumption upgrades will be the primary drivers of industry growth. The Asia-Pacific region, in particular, is poised to become a key growth engine for the global L-lysine market.

The global L-Polylysine HCL market size was estimated at USD 166.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
