Abstracts

Oat beta-glucan is a naturally occurring soluble dietary fiber derived from the cell walls of oats (*Avena sativa*). Chemically, it is a polysaccharide composed of glucose units linked primarily by beta-1,3 and beta-1,4 glycosidic bonds. This unique structure gives oat beta-glucan its viscosity and functional health benefits. Recognized for its role in promoting cardiovascular health, managing blood sugar levels, and supporting gastrointestinal health, oat beta-glucan is a highly valued ingredient in both food and nutraceutical industries. Beta-glucan from oats is distinct from similar compounds found in other sources, such as barley or fungi, due to its specific ratio of beta-1,3 to beta-1,4 linkages. This arrangement results in:

- High Water Solubility:** Oat beta-glucan forms a gel-like solution when mixed with water, giving it its characteristic viscosity.
- Viscosity:** The ability to form a viscous gel in the digestive tract is key to its health-promoting effects, such as reducing cholesterol absorption and stabilizing blood sugar.
- Molecular Weight Variability:** Depending on processing and extraction, the molecular weight of beta-glucan can vary, influencing its viscosity and efficacy.

One of the most well-documented benefits of oat beta-glucan is its ability to lower blood cholesterol levels. By binding to bile acids in the digestive tract, it promotes their excretion, prompting the liver to use cholesterol to synthesize more bile acids. This process leads to a reduction in circulating LDL cholesterol levels, which is a key risk factor for heart disease. The U.S. Food and Drug Administration (FDA) and the European Food Safety Authority (EFSA) both recognize that consuming at least 3 grams of oat beta-glucan daily can help reduce cholesterol levels. Oat beta-glucan slows the digestion and absorption of carbohydrates, leading to a gradual release of glucose into the bloodstream. This helps stabilize blood sugar levels, making it beneficial for individuals with diabetes or at risk of developing the condition. The gel-forming properties of beta-glucan enhance satiety, supporting weight management. Additionally, it acts as a prebiotic, promoting the growth of beneficial gut bacteria. This contributes to overall gut health and may reduce

symptoms of constipation. Emerging research suggests that beta-glucans can modulate immune function. While most immune-related studies focus on beta-glucans from fungi or yeast, oat beta-glucan may also play a role in enhancing the body's defense mechanisms. Oat beta-glucan is a highly versatile and health-promoting dietary fiber with established benefits for heart health, blood sugar management, and digestive wellness. Its unique functional properties and widespread applications in food, nutraceuticals, and cosmetics make it a valuable component of health-focused products. Continued research and innovation will likely expand its use, cementing its role as a key ingredient in the pursuit of a healthier lifestyle. Global Oat Beta-Glucan Sales key players include Lantmännen Oats, DSM, Guangye L&P Food Ingredient Co., Ltd, etc. Global top three manufacturers hold a share about 50%. Europe is the largest market, with a share about 40%, followed by Asia-Pacific, and North America. In terms of application, the largest application is Food, followed by Health-products, Cosmetics.

The global Oat Beta-Glucan market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
