Abstracts

The objective lenses are the optical elements closest to the specimen in microscopy. The objective lens gathers light from the specimen, which is focused to produce the real image that is seen on the ocular lens. Objective lenses are the most complex part of the microscope due to their multi-element design. It is this complexity that makes the objectives the most important components of microscopy. Life science refers to the study of living organisms including, microbes, human beings, animals, fungi, and plants. In life sciences, the need for objective lens that has high resolution and are small in size and also have a good working distance from what is being imaging is a major challenge. Global core objective lens for life science manufacturers include Olympus, Leica Microsystems, Zeiss etc. The top 5 companies hold a share about 72%. Japan is the largest market, with a share about 45%, followed by Europe and North America with the share about 28% and 13%. In terms of product, Max.10x-50x is the largest segment, with a share over 50%. And in terms of application, the largest application is scientific research, followed by commercial research.
