Abstracts

An Ocean Bottom Node (OBN) seismic survey is an advanced offshore geophysical technique used to acquire high-resolution images of the Earth's subsurface, primarily for oil and gas exploration and reservoir monitoring. It involves placing autonomous, battery-powered seismic sensors?called nodes?directly on the seafloor to record seismic waves generated by controlled sources like air guns. Unlike traditional towed-streamer methods, OBN surveys offer full-azimuth, long-offset, and high-fidelity data, making them especially effective in complex geological settings such as beneath salt domes or in congested production areas. Their flexibility, data quality, and reusability have made OBN systems a key technology in modern marine seismic acquisition.

The global OBN Seismic Survey market size was estimated at USD 152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global OBN Seismic Survey market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
