Abstracts

Ocean Bottom Node (OBN) Seismic Technology is an advanced geophysical method used for offshore subsurface exploration, particularly in oil and gas sectors. It involves deploying autonomous seismic sensors called nodes on the seabed to record seismic waves generated by controlled sources. Unlike traditional towed-streamer surveys, OBN systems provide higher data quality, improved imaging beneath complex geological structures (such as salt bodies), and full-azimuth, long-offset coverage. This makes them ideal for deepwater and congested areas where traditional methods struggle. OBN technology supports both exploration and reservoir monitoring with greater accuracy and flexibility.

The global OBN Seismic Technology market size was estimated at USD 152.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global OBN Seismic Technology market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
