Abstracts

An Occupant Sensing System (OSS) is a vehicle safety technology that detects the presence and characteristics of occupants in a vehicle's seats. It uses sensors, such as weight sensors, pressure sensors, and infrared sensors, to determine if a seat is occupied, the occupant's size, and sometimes their position. This information is crucial for optimizing the deployment of safety features like airbags. The OSS ensures that airbags are activated appropriately, preventing unnecessary or overly forceful deployment that could harm smaller occupants or children. The industry trend for Occupant Sensing Systems (OSS) is moving towards greater sophistication and integration with broader vehicle safety and automation systems. There's a strong push for higher accuracy and more detailed occupant classification, moving beyond simple presence detection to include precise identification of occupant size, posture, and even health conditions. This advancement is driven by the increasing complexity of advanced driver-assistance systems (ADAS) and the development of autonomous vehicles, where understanding the state of all occupants is critical for safe operation. Integration with in-cabin monitoring systems (ICMS) is becoming more common, allowing for real-time assessment of occupant alertness and well-being. Furthermore, the trend includes the use of advanced sensor technologies like 3D time-of-flight cameras and radar, which provide more comprehensive and reliable data compared to traditional sensors. There is also a push for more personalized safety features, where the OSS can tailor airbag deployment and other safety measures to the specific characteristics of each occupant. As vehicles become more connected, OSS data may also be used to improve overall vehicle safety by sharing information with other systems and even external services.

The global Occupant Sensing System (OSS) market size was estimated at USD 217.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
