Abstracts

As the name suggests, ocean-bound plastic is plastic that could potentially end up in our oceans ? this generates roughly 80% of plastic marine litter, according to the Ocean Bound Plastic Certification. This report focus on Recycled Ocean Bound Plastic.Around 500 million tons of plastic waste is produced every year, according to Our World in Data ? and mismanagement is one of the main reasons this overwhelming amount of plastic pollutes our oceans. Although a very straightforward term, ocean-bound plastic stretches beyond littering on beaches. In fact, it?s often a result of mainland plastic consumption. While many might believe we can just recycle more to solve the problem, the reality is that a large percentage of marine litter actually comes from non-commercially recyclable plastic materials. Greenpeace paints a clear picture of this, reporting that only 5%?6% of plastics were actually recycled in 2022.

The global Ocean Bound Plastics market size was estimated at USD 362.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
