Abstracts

Ocean observatories are complex systems integrating a variety of sensors, autonomous underwater vehicles, and landers, which transmit real-time measurement data from the seafloor to shore via optical cables, creating a platform capable of all-weather, long-term, continuous, real-time, and integrated in-situ observations in the deep sea; these systems not only enhance the efficiency of data processing by analyzing information underwater but also operate stably in extreme oceanic conditions due to their highly automated nature, providing valuable data for scientific research into the marine interior.
